#### **Preface**

This document is the main source of information regarding the degree project courses in the Faculty of Computing at Blekinge Institute of Technology. The document covers degree projects at the Bachelor's, one-year Master's, and two-year Master's level in computer science and software engineering as well as the degree projects in the Master of Science of Engineering (MSE¹) programs.

The aim is that these instructions are used by course responsibles, examiners, supervisors, appointed faculty reviewers, and students to learn about the generic degree project process and the expectations and responsibilities between the different roles.

Unfortunately, these instructions are far from complete. A complete draft is expected to be ready in the beginning of 2015. Nevertheless, we hope that the instructions, in their present form, represent a useful complement to the reference literature and the introductory lectures.

The examiner must always base his or her assessment and grading on the explicit learning outcomes defined in the most recently approved syllabus for the degree project course in question. However, our ambition has been to develop assessment procedures and templates that capture these learning outcomes. We still have some work to do before the templates and syllabuses are completely compatible.

Finally, it is important to note that the currently adopted generic degree project process at the Faculty of Computing and the corresponding templates, documents, instructions, and other items have been developed and improved by several individuals over the last years. Above all, we would like to thank Professor Tony Gorschek. He initiated and developed the first versions of the process and many of the supporting documents during his three years as examiner and course responsible for the degree projects on the Master's level in software engineering. Additionally, we would like to thank our colleagues at the Faculty of Computing, who have contributed with new material and contents, insightful ideas, and suggestions for improvement.

The authors

<sup>&</sup>lt;sup>1</sup>MSE = Swedish "Civilingenjör", a five-year Engineering degree that should not be confused with "Civil Engineering"

#### Introduction

The degree project is conducted at the end of the education programs that lead to Bachelor's, Master's, and Master of Science of Engineering's (MSE¹) degrees. The purpose of the project is for the student to practice the necessary skills used to independently define, plan, conduct, and present a project. The projects focus on research, on development, or contain a blend of both. At Blekinge Institute of Technology (BTH), the Master's projects should have a clear research focus while the Bachelor's and MSE projects can be focused on development. Regardless of the type of degree, it is important to note that all projects must have sound scientific backing.

During the planning, execution, and presentation, the student is expected to apply the knowledge and skills acquired during the education to independently and deeply explore one or more areas of the main subject. The student's main goal is to present, orally and in writing, the results of the degree project. In addition, the student will review and critically appraise another student's thesis.

These instructions are divided into six chapters: theory of science, research projects, development projects, academic writing, instructions for students, and instructions for supervisors. The first chapter provides a short introduction to the theory of science and introduces the main concepts of the technology and engineering sciences. The two subsequent chapters describe typical features of, and differences between, research and development projects. The main and reference course literature covers scientifically grounded research and development projects more deeply. Thus, the first three chapters of these instructions provide a complementary description of these topics and they are tailored to degree projects at BTH. Chapter four provides concrete suggestions and tips concerning academic writing. The purpose of the chapter is to help the student improve the quality of the written presentation of the project. This chapter should be complemented with relevant literature on academic writing. Normally, the supervisor will also suggest suitable books based on the student's ambition and current level of proficiency.

<sup>&</sup>lt;sup>1</sup>MSE = Swedish "Civilingenjör", a five year Engineering degree that should not be confused with "Civil Engineering"

The remaining two chapters describe the generic degree project process at the Faculty of Computing from the student's and supervisor's perspective. Students and supervisors will benefit from reading both of the chapters since they provide insights about the roles and the student–supervisor interactions as well as the interactions with the examiner and course responsible. The descriptions of the process provide can be used to understand the structure of the degree project courses and the motivations behind this structure. The interactions and roles are described and related to the expectations and obligations of each role.

The instructions also contain appendices that more formally describe the rules, instructions, and templates of the degree project courses. The first appendix contains all assessment templates. These templates are mainly used by the examiner during the assessment and grading of various examination parts. Two of these templates are also used by the supervisor and the appointed faculty reviewers to assess and recommend grades for the project plan and the final version of the thesis. The second appendix contains instructions for assessing the various aspects that constitute each ground for judgment in the templates. The third appendix contains instructions concerning the mandatory document templates for the project plan and the thesis.

# Theory of science

# Research projects

# **Development projects**

# **Academic writing**

### Instructions for students

- 6.1 Formulating the research idea
- 6.2 Selecting the supervisor
- 6.3 Writing the project plan
- 6.4 Conducting the project
- 6.5 Writing the thesis
- 6.6 Presenting and defending the thesis
- 6.7 Critical appraisal of another thesis

### Instructions for supervisors

- 7.1 The students' expectations
- 7.2 Supervision during the formulation of an idea
- 7.3 Supervision during the writing of a project plan
- 7.4 Assessment of the project plan
- 7.5 Supervision of the degree project
- 7.6 Assessment of the thesis draft
- 7.7 Supervision before the presentation and defense
- 7.8 Assessment of the final version of the thesis
- 7.9 Scientific publication and co-authorship

### Appendix A

### Assessment templates

The assessment templates are used by different constellations of examiners, supervisors, and appointed faculty reviewers to assess project plans, theses, presentations and defenses, and written and oral oppositions. It is important to remark that the assessment templates, the supervisor's assessment, and the assessments and recommendations provided by the appointed faculty reviewers only serve as a basis for decisions. The examiner is formally responsible for assessing and grading the different examination parts.

All examination parts are assessed using the 2-level or 3-level scale, except the thesis for which a 7-level scale is used. The difference between the 2-level and the 3-level scale is that the latter includes the assessment *Fail – Complementation required*. The grade of an examination part is based on a summarised assessment of several aspects of a number of grading criteria, unless an alternative approach is explicitly stated. Table A.1 describes the various assessment scales.

The grading criteria and aspects for all examination parts are summarised in Table A.2.

To achieve the grade Pass (G) on the 2-level or the 3-level scale, all grading criteria must have received a value of at least 1. If any grading criterion is assessed as Fail – Complementation required (UX/FX/0), the student is given a time-limited opportunity to complement the

	3-level	5-level	7-level	
Assessment	scale	scale	scale	Value
Fail – Substantial further work is required	U	U	F	_
Fail – Complementation required for G/E	UX	UX	FX	0
Acceptable	G	G	Е	1
Satisfactory	G	G	D	2
Good	G	G	С	3
Very good	G	VG	В	4
Excellent	G	VG	A	5

Table A.1: Assessment scales and values

Process	X	X			
Contents	X	X		X	
Contribution		X			
Presentation	X	X	X	X	X
Overall impression		X			

Table A.2: Overview over grading criteria for all examination parts.

examined part in question. After complementation, a thesis will be either graded as Fail (U/F) or as Pass (G/E). The thesis will be awarded the grade Fail (U/F) if:

- the thesis has not been submitted to the examiner within the designated deadline after an oral presentation and defense, or if
- the examiner determines that the thesis does not fulfil the requirements for a Pass grade (for example, due to that some grading criterion does not reach a Pass level, or due to that one or more grading criteria are considered as Fail – Complementation required).

Each student is to be given up to five opportunities to be examined in order to achieve a Pass grade on the degree project course. After two such opportunities, the student is entitled to request a change of examiner. Such a request should be made in writing to the faculty dean.

During the assessment of the thesis, a weighted mean is computed based on the values of the assessed aspects for all grading criteria. The weighted mean is rounded off to an integer according to Swedish rounding rules<sup>1</sup>. This integer is then translated to the corresponding grade according to the 7-level scale. If the computed grade differs more than two steps from the lowest aspect value, the grade is lowered until it does not differ more than two steps from the lowest aspect value.

The weighting of grading criteria of differs between degree projects of different types (see Table A.3).

#### A.1 Assessment template for project plans

Through the project plan, the student shall demonstrate broad knowledge and a deepened understanding of methodologies relevant for the subject. The project plan shall describe a clearly defined and delimited degree project with the purpose to creatively, critically, and independently answer one or more identified and formulated research

¹http://en.wikipedia.org/wiki/Swedish\_rounding

Assessment		1-year	2-year	
Criterion	Bachelor	Master	Master	MSE
Process	0.20	0.20	0.10	0.25
Contents	0.40	0.40	0.40	0.35
Contribution	0.00	0.10	0.25	0.20
Presentation	0.40	0.30	0.25	0.20

Table A.3: Weighting of criteria for various types of theses.

Criterion	Aspect	Value
Process	Power of initiative and creativity	
	Critical thinking and attitude	
	Openness to critique and supervision	
Contents	Problem identification and formulation	
	Evaluation	
	Method selection and application	
	Planning	
Presentation	Disposition	
	Adherence to formal rules and templates	
	Description of work	
	Analysis and argumentation	
	Language	

Table A.4: Assessment template for project plans. The Process shall only be assessed by supervisors.

questions within at least one specific area of the subject. The project plan shall contain a critical review of relevant scientific literature and it shall clarify the student's view and understanding of the state-of-the-art and the state-of-practice in the selected area of study. The project plan shall identify any potential risk related to the selected approach and how they can be mitigated. The project plan should also describe specific needs of knowledge gathering necessary for completing the degree project. The student shall define a clear and adequate time and activity plan and describe suitable approaches to answer the formulated research questions within the given constraints.

The assessment template for project plans is presented in Table A.4. The supervisor assesses the project plan based on the following grading criteria: Process, Contents, and Presentation. The other roles only assess Contents and Presentation. Since the project plan merely describes *proposed work*, the assessment of several aspects is based on the expected outcomes, assuming that the student pursues the project according to the project plan.

#### A.2 Assessment template for theses

Through the thesis, the student shall demonstrate broad knowledge and a deepened understanding of methodology in the subject. The thesis shall contain the description of a clearly defined and delimited degree project for which the purpose was to creatively, critically, and independently answer one or more identified and formulated research questions within at least one specific area of the subject. The student shall, through the thesis, demonstrate significantly deepened knowledge in the selected area of study, which comprises deepened insights of the state-of-the-art and the state-of-practice. The thesis shall contain a critical review of related scientific literature within the selected area of study. Furthermore, the thesis shall clearly and in detail describe and motivate a suitable approach to answering the formulated research question(s). The conducted degree project shall contribute to knowledge development in the subject area. The thesis shall contain a clear description of findings as well as an insightful and scientifically based analysis and synthesis of these findings. The contribution shall be discussed in relation to the relevant scientific, engineering, societal, and ethical aspects. The thesis must adhere to the standards and requirements of scientifically grounded work.

The assessment template for theses is presented in Table A.5. Grading criteria and aspects are almost identical for project plans and theses in terms of their number and names, except for (i) the criterion "Contribution", which is only applicable for thesis assessment and (ii) the aspect "Planning and execution", which corresponds to the execution of the plan described in the project plan, and has therefore move from "Content" to "Process". The meaning of some of the aspects, however, differs between the two artefacts since several of the aspects of the criteria concerning the project plan are assessed from the perspective of expected outcomes instead of actual outcomes (see (ii) above). The supervisor assesses the thesis based on the criteria Process, Contents, and Presentation while the other roles only assess Contents and Presentation.

#### A.2.1 Example

The supervisor assesses his/her MSE student's thesis and assigns a value of 3 (G/C) for the overall impression. The criteria Process, Contents, Contribution, and Presentation are assessed with the following values:

$$Process = \{1,2,1,1\}$$
 $Contents = \{2,5,1\}$ 
 $Contribution = \{2,3\}$ 
 $Presentation = \{4,4,2,1,1\}$ 

Criterion	Aspect	Value	
Process	Independence, initiative and creativity		
	Critical thinking and attitude		
	Planning and execution		
	Openness to critique and supervision		
Contents	Problem identification and formulation		
	Evaluation		
	Method selection and application		
Contribution	Contribution to research area (Master only)		
	Contribution to development (MSE only)		
	Synthesis		
Presentation	Disposition		
	Adherence to formal rules and templates		
	Description of work		
	Analysis and argumentation		
	Language		
Overall impression*	General impression of the thesis		

Table A.5: Assessment template for theses. The Process shall only be assessed by supervisors. \*\*The general impression of the thesis shall comprise a quantitative assessment of the overall impression of the thesis. If the value of this aspect differs from the integer computed by rounding the result of the weighted aspect evaluation, the deviation shall be recorded and discussed in the reviewing committee.

The supervisor considers the weighting scheme for MSE degree projects (see Table A.3) and then computes the mean:

$$0.25(\frac{1+2+1+1}{4}) + 0.35(\frac{2+5+1}{3}) + 0.20(\frac{2+3}{2}) + 0.20(\frac{4+4+2+1+1}{5}) = 2.23$$

The mean is rounded according to the Swedish rounding rules and the resulting value, 2, corresponds to G/D. The examiner evaluates the same thesis by assessing Contents, Contribution, and Presentation (but not Process):

$$Contents = \{3, 2, 3\}$$

$$Contribution = \{4, 2\}$$

$$Presentation = \{3, 2, 4, 2, 2\}$$

The examiner considers the weighting scheme for MSE degree projects and then computes the mean<sup>2</sup> of his or her own assessment of all criteria, except Process:

$$0.35(\frac{3+2+3}{3}) + 0.20(\frac{4+2}{2}) + 0.20(\frac{3+2+4+2+2}{5}) * \frac{4}{3} = 2.43$$

The mean is rounded off according to the Swedish rounding rules and the resulting value, 2, corresponds to G/D. The appointed faculty reviewers also evaluate the same thesis and they all conclude that the thesis is worth 3, which corresponds to G/C. The examiner discusses the thesis with the appointed faculty reviewers. Since there is consensus among the faculty reviewers and their recommendations are identical to the overall impression of the supervisor, the examiner decides to grade the thesis as G/C.

#### A.3 Assessment template for oral presentations and defenses

During the presentation and defense of the degree project, the student shall demonstrate the necessary skills to orally communicate and clearly describe his or her conclusions and the basis of these conclusions in a dialogue with the examiner, senior lecturers from the subject area, students from the subject area who are on the same level, and lay people. Table A.6 describes the criteria for judgment and their aspects, for oral presentations and defenses. Only the examiner assesses the oral presentations and defenses.

#### A.4 Assessment template for the written opposition

Through the opposition report, the student shall demonstrate his or her ability to provide constructive criticism and feedback and communicate his or her conclusions after

<sup>&</sup>lt;sup>2</sup>The factor  $\frac{4}{3}$  compensates for the lacking 0.25 for the Process criterion.

Criterion	Aspect	Value
Presentation	Oral description of problem and method	
	Oral description of analysis and contribution	
	Overall communication skills	
	Argumentation- and discussion abilities	

Table A.6: Assessment template for oral presentations and defenses.

Criterion	Aspect	Value
Contents	Description of critical review	
	Description of necessary revisions	
	and recommended revisions	
Presentation	Analysis and argumentation	
	Language	

Table A.7: Assessment template for the written opposition.

reading another student's thesis. The student shall review the basis for the provided criticism and conclusions. The constructive criticism, the conclusions, and the arguments behind them, shall be summarised in a report to be read by the examiner as well as the author of the reviewed thesis. The opposition report shall include the results of a systematic and critical review in which sufficient consideration has been put on all relevant scientific, engineering, societal, and ethical aspects of the thesis' contribution.

Table A.7 describes the criteria for judgment and their aspects, for the written opposition report. Only the examiner assesses the written opposition reports. The opponent is expected to first describe the results of the critical review and then a list of clear and concise suggestions for necessary and recommended revisions. The necessary changes are those changes that must be performed in order for the opponent to consider a Pass grade for the thesis. The recommended changes are those changes that should be performed in order to increase the quality (and grade) of the thesis.

#### A.5 Assessment template for the oral opposition

Through the oral opposition, the student shall demonstrate his or her abilities to provide constructive criticism and discuss his or her conclusions about the other student's thesis based on the conducted review. The opponent shall review the arguments behind the criticism and the conclusions. The constructive criticism, the conclusions, and the arguments behind them shall be discussed in dialogue with the author of the thesis on a level that makes it possible for the participating students, lay people, and researchers to appreciate and understand the core of the discussion. The provided criticism must be

Criterion	Aspect	Value
Presentation	Overall communication skills	
	Analysis and argumentation	

Table A.8: Assessment template for the oral opposition.

based on a systematic and critical review of the thesis in question in which consideration has been put on all relevant scientific, engineering, societal, and ethical aspects of the thesis' contribution.

Table A.8 describes the criteria for judgment and their aspects, for the oral opposition. Only the examiner assesses and grades the oral opposition. The opponent is expected to first present balanced and constructive criticism (the aspect *Overall communication skills*) and then lead a constructive and critical discussion (the aspect *Analysis and argumentation skills*) during which the respondent must defend his or her thesis.

### Appendix B

### Evaluation and weighting of aspects

The project plan and the thesis are assessed by the supervisor, the examiner, and the appointed faculty reviewers. The supervisor assesses Process, Contents, Contribution, and Presentation. The other roles only assess Contents, Contribution, and Presentation. Since the course grade is only based on the assessment of the thesis, the weighted mean of aspect values is only computed for this examination part. The weighting of aspects is determined by the criterion weight. Each criterion, and thus all its corresponding aspects, is associated with a relative weight in comparison to the other grading criteria. The relative weights differ between the various types of degree projects according to the description in the next section.

All degree project courses share the same grading criteria, see Table A.2. However, their weighting and the description of some of the aspects differ. Table A.3 describes the relative weights of the grading criteria for Bachelor's, One-year Master's, Two-year Master's, and Master of Science of Engineering's (MSE¹) degree projects. During the evaluation of MSE degree projects, the supervisor bears a stronger responsibility since he or she is the only one with a first-hand account of the Process.

<sup>&</sup>lt;sup>1</sup>MSE = Swedish "Civilingenjör", a five year Engineering degree that should not be confused with "Civil Engineering"

### B.1 Evaluation of aspects for project plans and theses

#### B.1.1 Process

Independen	ce, initiative and creativity			
Fail	Lets supervisor be the driver. Does not provide own suggestions for planning,			
	execution, contents, or focus. Insufficient or defective status/progress report-			
	ing.			
Acceptable	Initiates contact with the supervisor. Proposes simple or initial own ideas. In			
	large, the main driver of the work. Acceptable status/progress reporting.			
Satisfactory	Initiates and keeps contact with the supervisor. Proposes own ideas. Is the			
	main driver of the work and provides status/progress reports as agreed with			
	supervisor.			
Good	Keeps good contact with the supervisor, based on agreed terms. Proposes and			
	develops own ideas, which are creative to some degree. Provides regular and			
	useful status/progress reports.			
Very good	Keeps very good contact with the supervisor. Improves continuously his/her			
	capability to create, develop and realize own ideas.			
Excellent	Excellent contact with the supervisor. Creates, develops, and realizes own cre-			
	ative ideas of high quality.			

Critical thir	iking and attitude	
Fail	Indiscriminating attitude. Inability or unwillingness to critically evaluate the	
	validity of various claims.	
Acceptable	Limited critical attitude. Indicates ability to critically evaluate the validity of	
	various claims.	
Satisfactory	Critical attitude, in large. Demonstrates ability to critically evaluate the validity	
	of various claims.	
Good	Critical attitude. Clearly demonstrates ability to critically evaluate the validity	
	of various claims.	
Very good	d Critical attitude. Very good ability to critically evaluate the validity of vari-	
	ous claims. Shows insight into the consequences that follow weakly/strongly	
	supported claims.	
Excellent	Scientific attitude. Excellent ability to critically evaluate the validity of vari-	
	ous claims. Deep insight into the consequences that follow weakly/strongly	
	supported claims.	

Planning and execution (theses only)	
Fail	Unrealistic planning that is not supported. Irregular work of insufficient qual-
	ity. Little progress.
Acceptable	Acceptable planning that considers some relevant risks. Regular work of ac-
	ceptable quality. Acceptable progress.
Satisfactory	Satisfactory planning that considers many relevant risks. Systematic execution
	with steady progress.
Good	Good planning and basic risk management (i.e. risk identification, impact anal-
	ysis, and mitigation). Steady progress with high quality.
Very good	Very good planning and good risk management. Steady progress and status
	tracking with high quality. Basic revision of plans.
Excellent	Excellent planning and very good risk management. Steady progress and status
	tracking with high quality. Regular revision of plans.

Openness to critique and supervision	
Fail	Inability to develop method(s) or content(s) despite recurring constructive feed-
	back. Little personal or content-related development.
Acceptable	Acceptable development regarding problem solving, creativity and academic
	writing based on supervision. Mistakes and defects are corrected based on
	direct feedback.
Satisfactory	Satisfactory development regarding problem solving, creativity and academic
	writing based on supervision. Mistakes and defects are corrected based on
	feedback. Limited extrapolation of feedback to other parts of his/her work.
Good	Responsive and adaptive for supervision. Develops ability to self-identify mis-
	takes, errors, and improvement opportunities. Good extrapolation of feedback
	to other parts of his/her work.
Very good	Ability to request appropriate forms of supervision in different situations. Abil-
	ity to independently self-identify mistakes, errors, and improvement opportu-
	nities. Very good extrapolation and adaptation of feedback to the rest of his/her
	work.
Excellent	Excellent ability to request and utilize appropriate forms of supervision. Well
	developed ability to critically examine his/her own or others' work. Excellent
	extrapolation and adaptation of feedback to the rest of his/her work.

#### B.1.2 Content

Problem identification and formulation	
Fail	Brief, superficial, unrealistic or defective problem formulation or acceptable
	formulation of an irrelevant, trivial problem, or unsolvable problem.
Acceptable	Acceptable formulation of a relevant and non-trivial problem.
Satisfactory	Satisfactory formulation of a relevant and sufficiently complex problem.
Good	Good formulation of a relevant and sufficiently complex problem that, when
	solved, could represent a minor contribution.
Very good	Very good formulation of a relevant and sufficiently complex problem that,
	when solved, could represent a contribution.
Excellent	Excellent formulation of a relevant and sufficiently complex problem that, when
	solved, could represent a substantial contribution.

<b>Evaluation</b>	
Fail	Inadequate evaluation based on inadequate evaluation method, improperly applied evaluation method, or lack of analysis. Significant assumptions are not discussed.
Acceptable	Acceptable evaluation using appropriate evaluation method(s). Limited analysis and evaluation regarding some relevant perspectives/aspects. Basic assumptions are discussed briefly.
Satisfactory	Satisfactory evaluation using the most appropriate method(s). Analysis and evaluation of most relevant perspectives/aspects. Assumptions are discussed.
Good	Good evaluation using the most appropriate method(s). Thorough analysis of the most relevant perspective/aspect and satisfactory analysis from remaining perspectives/aspects. Assumptions are discussed thoroughly.
Very good	Exhaustive evaluation of all relevant perspectives/aspects with the method(s) that are best suited. All assumptions are discussed thoroughly.
Excellent	Excellent evaluation that meets all requirements for the evaluation of scholarly work.

Method sele	Method selection and application	
Fail	Inadequate method selection or poor application of method. Clear motivation,	
	description, or analysis of the selected method is missing.	
Acceptable	Acceptable selection of method and acceptable application of method. The	
	selected method is motivated, described, and analysed in an acceptable way.	
	Alternative methods are briefly discussed.	
Satisfactory	Satisfactory selection of method(s) and satisfactory application of method(s).	
	The selected method is motivated, described, and analysed in a satisfactory	
	way. Alternative methods are discussed.	
Good	Good selection of methods that together represent a comprehensive and ap-	
	propriate approach. Good application of method(s). The method collection is	
	well motivated, described, and analysed. Alternative methods are discussed	
	thoroughly.	
Very good	Very good selection of methods that together represent a comprehensive and	
	appropriate approach. Very good application of method(s). The method collec-	
	tion is very well motivated, described, and analysed. Alternative methods are	
	discussed thoroughly.	
Excellent	Excellent selection and application of methods that indicate a thorough under-	
	standing of the chosen field and the strengths, weaknesses, and limitations of	
	different methods.	

Planning (project plans only)	
Fail	Trivial or unrealistic WBS (Work Breakdown Structure) that is not supported.
	Considers only trivial risks. Lacks impact analysis and mitigation strat-
	egy/plan.
Acceptable	Feasible, but not very realistic WBS and schedule. Identifies relevant and ir-
	relevant risks. Ignores some important risks. Very simple impact analysis and
	mitigation strategy/plan.
Satisfactory	Largely realistic WBS and schedule. Identifies most important risks. Ignores
	irrelevant risks. Acceptable impact analysis and mitigation strategy/plan.
Good	Highly realistic WBS and schedule. Identifies all (and only) important risks.
	Ignores irrelevant risks. Acceptable and useful impact analysis and mitigation
	strategy/plan.
Very good	Excellent WBS and schedule. Identifies all (and only) important risks. Very
	good impact analysis and mitigation strategy/plan.
Excellent	Excellent WBS and schedule. Identifies all important risks and further relevant
	risks. Excellent impact analysis and mitigation strategy/plan.

### B.1.3 Contribution (theses only)

Contribution to research area (Master theses only)	
Fail	Lacks contribution or potential contribution is not discussed or analysed.
Acceptable	Limited contribution. Limited analysis of the contribution from a relevant per-
	spective (e.g., scientific, ethical, social, etc.).
Satisfactory	Clear contribution that is analysed from a relevant perspective.
Good	Clear contribution that is analysed from several relevant perspectives.
Very good	Scientific contribution that is analysed from all relevant perspectives.
Excellent	Scientific contribution of satisfactory international quality equivalent to a pub-
	lishable workshop or conference article.

Contribution to development (MSE theses only)	
Fail	Lacks contribution to research or development or potential contribution is not
	discussed or analysed.
Acceptable	Limited contribution to research or development. Limited analysis of the con-
	tribution from some relevant perspectives (e.g., ethical, social, sustainable de-
	velopment, etc.).
Satisfactory	Clear contribution to research or development that is analysed from some rele-
	vant perspectives.
Good	Clear contribution to research or development that is analysed from all relevant
	perspectives.
Very good	Scientific contribution to research or development of acceptable international
	quality equivalent to a publishable workshop or conference article.
Excellent	Scientific contribution to research or development of high international quality
	equivalent to a publishable journal article.

Synthesis	
Fail	Lacks synthesis. Just restates or summarises existing works and own materials.
Acceptable	Limited synthesis. Limited references to analyses of existing works and own
	materials for some limited informed conclusions.
Satisfactory	Acceptable synthesis. Utilizes analyses of existing works and own materials for
	informed conclusions. Answers some "So What?" questions.
Good	Satisfactory synthesis. Reorganizes and summarises analyses of existing works
	and own materials for conclusions that go beyond the analysis of individual
	works or results. Answers many "So What?" questions.
Very good	Clear thread of reasoning and reorganisation of thoughts based on analyses of
	existing works and own materials to derive new knowledge. Focuses on "So
	What?" questions.
Excellent	Clear and excellent of reasoning and reorganisation of thoughts based on anal-
	yses of existing works and own materials to derive new knowledge. Focuses
	on "So What?" questions.

#### B.1.4 Presentation

Disposition	
Fail	Poor organisation of chapters and sections. No clearly visible thread of reason-
	ing throughout the work.
Acceptable	Acceptable organisation of chapters and sections. Contains mainly those chap-
	ters and sections that are required for the type of work in a suitable ordering.
	Chapter and section headers are mainly generic.
Satisfactory	Satisfactory organisation of chapters and sections. Contains appropriate chap-
	ters or sections beyond the required ones in a suitable ordering. Chapter and
	section headers are adapted to the topic at hand.
Good	Systematic and appropriate disposition that supports the readability and com-
	prehensibility of the text. The text is cohesive on the level of section headers.
Very good	Very good systematic and appropriate disposition that supports the readability
	and comprehensibility of the text on all levels. The text is cohesive and coherent
	on the level of section headers.
Excellent	Excellent disposition comparable to a published article in the area.

Adherence	to formal rules and templates
Fail	The document breaks clearly with relevant templates, rules, or guidelines for
	the text and the citations/references without motivation.
Acceptable	In large, the document follows relevant templates, rules, or guidelines. Some
	consideration has been given to instructions. In large, citations and references
	are correct and consistent.
Satisfactory	The document follows relevant templates, rules, or guidelines. Great care has
	been taken to instructions. Citations and references are mostly correct and
	consistent.
Good	Follows all relevant rules and instructions regarding content and presentation.
	Citations and references are basically flawless.
Very good	Follows all relevant rules and instructions regarding content and presentation.
	Citations and references are basically flawless. Complete contact information,
	thesis ID, appropriate title, and fully structured abstract.
Excellent	High-quality document that complies with all relevant templates, rules, and
	instructions.

Description	Description of work	
Fail	The work lacks one or more critical elements. The presentation is cumbersome.	
	There are many and obvious flaws in clarity.	
Acceptable	Acceptable breadth and depth. All necessary components are at least briefly	
	described. The description is fairly complete.	
Satisfactory	Satisfactory breadth and depth. All necessary components are included and	
	described. The description is complete.	
Good	Good breadth and depth. All necessary components are included and de-	
	scribed adequately. The description is complete. The text is cohesive.	
Very good	Very good breadth and depth. All relevant components are included and de-	
	scribed very good. The description is clear, concise, and complete. The text is	
	cohesive and coherent.	
Excellent	Excellent breadth and depth. All relevant components are included and de-	
	scribed excellently. The description is very clear, concise, and complete. The	
	text is cohesive and coherent.	

Analysis and argumentation	
Fail	Analysis and argumentation missing, incorrect, not based on reasonable as-
	sumptions, or does not rest on a scientific basis.
Acceptable	Analysis and argumentation are based on some evidence. The level of analysis
	is generally acceptable for the discussed issues.
Satisfactory	Analysis and argumentation are based on scientific evidence. The level of anal-
	ysis is satisfactory for the discussed issues.
Good	Analysis and argumentation are based on scientific evidence. Clear analysis
	and reasoning contribute to insights in the chosen area.
Very good	Analysis and argumentation are based on scientific evidence. In-depth analysis
	and reasoning contribute to insights in the chosen area.
Excellent	Excellent analysis and argumentation. Advanced analysis and stringent rea-
	soning contribute to substantial insights in the chosen area.

Language	
Fail	Poor. The text contains many grammatical errors, long and complex sentences,
	contradictions, or slang expressions. The content does not meet the require-
	ments for scientific text.
Acceptable	Acceptable language processing. The text is readable and understandable.
	Many linguistic shortcomings.
Satisfactory	Satisfactory language processing. In large the subject is treated with clear prose,
	but does not meet the requirements for scientific text. Some linguistic short-
	comings.
Good	Good language processing. The subject is treated with clear prose that largely
	meets the requirements for scientific text. Some linguistic shortcomings.
Very good	Very good language processing. The subject is treated with clear prose that
	meets the requirements for scientific text of high quality.
Excellent	Excellent language processing. The subject is treated with very clear prose that
	meets the requirements for scientific text of very high quality.

# B.2 Evaluation of aspects for oral presentations and defenses

#### **B.2.1** Presentation

Oral descrip	otion of problem and method
Fail	Neither problems nor methods are motivated sufficiently. Descriptions are gen-
	erally superficial and indistinct. The audience has difficulties understanding
	what was done and why.
Acceptable	Acceptable motivation of problems and methods. Descriptions are too brief or
	too comprehensive, but at an acceptable depth/level, so that the audience, in
	large, can understand most of what was done and why.
Satisfactory	Clear motivation of problems and methods. Descriptions are too brief or too
	comprehensive, but at a satisfactory depth/level, so that the audience, can un-
	derstand what was done and why.
Good	Clear and concise motivation of problems and methods. Descriptions are of ad-
	equate length and sufficient depth/level, so that the audience, can understand
	clearly what was done and why.
Very good	Problems and methods are described and motivated very clearly and concisely.
	The depth/level of the descriptions allows the audience to get deep insights on
	what was done and why. Problem aspects that are relevant outside the main
	topic of the thesis are indicated. Methods are compared to some related work.
Excellent	Problems and methods are described and motivated very clearly and concisely.
	The depth/level of the descriptions allows the audience to get very deep in-
	sights on what was done and why. Problem aspects that are relevant outside
	the main topic of the thesis are discussed clearly. Methods are compared sys-
	tematically with related work.

Oral descrip	Oral description of analysis and contribution	
Fail	Neither analyses nor contributions are discussed or motivated clearly enough.	
	Descriptions are generally superficial and indistinct. The audience has difficul-	
	ties to understand conclusions and contributions.	
Acceptable	Acceptable motivation of analyses and contributions. Descriptions are too brief	
	or too comprehensive, but at an acceptable depth/level, so that the audience,	
	in large, can understand conclusions and contributions.	
Satisfactory	Clear motivation of analyses and contributions. Descriptions are too brief or	
	too comprehensive, but at a satisfactory length and depth/level, so that the	
	audience, can understand conclusions and contributions clearly.	
Good	Clear and concise motivation of analyses and contributions. Descriptions are	
	of adequate length and sufficient depth/level, so that the audience, can under-	
	stand conclusions and contributions clearly.	
Very good	Analyses and contributions are described and motivated very clearly and con-	
	cisely. The depth/level of the descriptions allows the audience to get deep	
	insights into conclusions and contributions. The contributions' impact on ar-	
	eas outside the main topic of the thesis are indicated. Results are compared to	
	related work.	
Excellent	Analyses and contributions are described and motivated very clearly and con-	
	cisely. The depth/level of the descriptions allows the audience to get very deep	
	insights into conclusions and contributions. The contributions' impact on areas	
	outside the main topic of the thesis are discussed clearly. Results are compared	
	systematically with related work.	

Overall communication skills	
Fail	The presentation is either too long or too short. The presentation is too vague
	or too superficial and not on an academic level. Poor language. Poor visuals.
Acceptable	The presentation is largely on time. The presentation is largely on an acceptable
	academic level. Acceptable language. Acceptable visuals.
Satisfactory	The presentation is on time. The presentation is on an acceptable academic
	level. Satisfactory language. Satisfactory visuals.
Good	The presentation is on time. The presentation is on an adequate academic level.
	Good language. Good visuals. Maintains interest of audience.
Very good	The presentation is on time. The presentation is on a high academic level. Very
	good language. Very good visuals. Maintains interest of audience.
Excellent	The presentation is on time. The presentation is on a very high academic level.
	Excellent language. Excellent visuals. Maintains interest of audience.

Argumental	Argumentation- and discussion abilities	
Fail	Insufficient, inaccurate, or very vague answers. Very short or excessively long	
	answers. Poor ability to handle critique constructively and objectively and to	
	argue in defense.	
Acceptable	Most answers are clear, and largely accurate but mostly too brief or for lengthy.	
	Acceptable ability to objectively and constructively handle critique and discuss	
	basic positions.	
Satisfactory	All answers are clear, factual, and largely accurate, and mostly of adequate	
	length/depth. Satisfactory ability to objectively and constructively handle cri-	
	tique and discuss various positions.	
Good	All answers are insightful, clear, factual, and accurate, and of adequate	
	length/depth. Good ability to objectively and constructively handle critique	
	and engage in basic technical and scientific discussions.	
Very good	All answers are insightful, clear, factual, and accurate, and of adequate	
	length/depth. Very good ability to objectively and constructively respond to	
	critique and engage in deep technical and scientific discussions.	
Excellent	All answers are insightful, clear, factual, and accurate, and of adequate	
	length/depth. Excellent ability to objectively and constructively respond cri-	
	tique and engage in deep technical and scientific discussions.	

# B.3 Evaluation of aspects for written oppositions

## B.3.1 Contents

Description	Description of critical review	
Fail	The report is sloppily executed and contains numerous errors. The presentation	
	is generally unclear and inadequate.	
Acceptable	The critique is largely objective, relevant, and accurate. Contains some lan-	
	guage and content errors. Acceptable structure and length/depth.	
Satisfactory	The critique is objective, relevant, and accurate. Contains few language and	
	content errors. Satisfactory structure and length/depth.	
Good	The critique is balanced, objective, relevant, and accurate. Contains very few	
	language and content errors. Well-structured, well-organized, and of adequate	
	length/depth.	
Very good	The critique is balanced, objective, relevant, and accurate. Contains very few	
	language and content errors. Well-structured, well-organized, and of adequate	
	length/depth. Comments are systematically arranged and each comment is	
	clearly warranted.	
Excellent	The critique is very balanced, objective, relevant, and accurate. Basically free	
	of errors. Excellent structure, organization, and length/depth. Comments are	
	systematically arranged and each comment is clearly motivated scientifically.	
	Related work is cited as necessary.	

Description	Description of necessary revisions and recommended revisions	
Fail	Suggestions are carelessly described and contain numerous errors. Unclear	
	how the suggestions would improve the reviewed thesis. The presentation is	
	generally unclear and inadequate.	
Acceptable	Suggestions are mostly constructive, relevant, and accurate. In large, it is clear	
	how the suggestions can be implemented and how they might improve the	
	reviewed thesis. Contains some language and content errors.	
Satisfactory	Suggestions are constructive, relevant, and accurate. It is clear how the sugges-	
	tions can be implemented and how they will improve the reviewed thesis. Con-	
	tains few language and content errors. Satisfactory structure and length/depth.	
Good	Suggestions are constructive, highly relevant, and accurate. It is clear how the	
	suggestions can be implemented and how they will improve the reviewed the-	
	sis. Contains few language and content errors. Well-structured, well-organized,	
	and of adequate length/depth.	
Very good	Suggestions are very constructive, highly relevant, and accurate. Very clear	
	how the suggestions can be implemented and how they will improve the re-	
	viewed thesis. Contains very few language and content errors. Well-structured,	
	well-organized, and of adequate length/depth. Suggestions are systematically	
	arranged and each suggestion is clearly warranted.	
Excellent	Suggestions are very constructive, highly relevant, and accurate. Very clear	
	how the suggestions can be implemented and how they will improve the re-	
	viewed thesis. Basically free of errors. Excellent structure, organization, and	
	length/depth. Suggestions are systematically arranged and each suggestion is	
	clearly motivated scientifically. Related work is cited as necessary.	

## **B.3.2** Presentation

Analysis and argumentation	
Fail	Analysis and argumentation missing, incorrect, not based on reasonable as-
	sumptions, or does not rest on a scientific basis.
Acceptable	Analysis and argumentation are based on some evidence. The level of analysis
	is generally acceptable for the discussed issues.
Satisfactory	Analysis and argumentation are based on scientific evidence. The level of anal-
	ysis is satisfactory for the discussed issues.
Good	Analysis and argumentation are based on scientific evidence. Clear analysis
	and reasoning contribute to insights in the chosen area.
Very good	Analysis and argumentation are based on scientific evidence. In-depth analysis
	and reasoning contribute to insights in the chosen area.
Excellent	Excellent analysis and argumentation. Advanced analysis and stringent rea-
	soning contribute to substantial insights in the chosen area.

Language	
Fail	Poor. The text contains many grammatical errors, long and complex sentences,
	contradictions, or slang expressions. The content does not meet the require-
	ments for scientific text.
Acceptable	Acceptable language processing. The text is readable and understandable.
	Many linguistic shortcomings.
Satisfactory	Satisfactory language processing. In large the subject is treated with clear prose,
	but does not meet the requirements for scientific text. Some linguistic short-
	comings.
Good	Good language processing. The subject is treated with clear prose that largely
	meets the requirements for scientific text. Some linguistic shortcomings.
Very good	Very good language processing. The subject is treated with clear prose that
	meets the requirements for scientific text of high quality.
Excellent	Excellent language processing. The subject is treated with very clear prose that
	meets the requirements for scientific text of very high quality.

# **B.4** Evaluation of aspects for oral oppositions

### **B.4.1** Presentation

Overall communication skills	
Fail	The presentation is either too long or too short. The questions are too vague
	or too superficial and not on an academic level. Most questions are irrelevant.
	Poor language.
Acceptable	The presentation is largely on time. The questions are largely relevant and on
	an acceptable academic level. Acceptable language.
Satisfactory	The presentation is on time. Most questions are relevant and on an satisfactory
	academic level. Satisfactory language.
Good	The presentation is on time. All questions are relevant and on an adequate
	academic level. Good language. Maintains interest of audience.
Very good	The presentation is on time. All questions are highly relevant and on a high
	academic level. Very good language. Maintains interest of audience.
Excellent	The presentation is on time. All questions are highly relevant and on a very
	high academic level. Excellent language. Maintains interest of audience.

Analysis an	Analysis and argumentation	
Fail	Irrelevant, inaccurate, or very vague questions. Very short or excessively long	
	questions. More statements than actual questions.	
Acceptable	Most questions are clear, and largely relevant and accurate. Acceptable ability	
	to present critique objectively and constructively.	
Satisfactory	Most questions are clear, relevant and accurate. Satisfactory ability to present	
	critique objectively and constructively. Acceptable ability to engage in technical	
	or scientific discussions.	
Good	All questions are clear, relevant and accurate. Good ability to present critique	
	objectively and constructively. Satisfactory ability to engage in technical and	
	scientific discussions.	
Very good	All questions are insightful, very clear, highly relevant and accurate. Very good	
	ability to present critique objectively and constructively. Very good ability to	
	engage in deep technical and scientific discussions.	
Excellent	All questions are very insightful, very clear, highly relevant and accurate. Ex-	
	cellent ability to present critique objectively and constructively. Excellent ability	
	to engage in deep technical and scientific discussions.	

# Appendix C

# Document templates

The project plan, the opposition report, and the thesis shall be written using official document templates. Refer to *Degree projects at DIDD*, *DIPT*, and *DIKR* at the Student Portal on the BTH website to find these document templates. This chapter describes necessary and recommended content as well as additional formal rules and requirements that govern the content of the documents to be produced in the degree project courses.

For all documents, size should be appropriate for the content. That means that you should write concise and to the point. A longer document will not necessarily be better. On the contrary, adding irrelevant, inappropriate, or repetitive content will likely result in lower marks. For details on academic writing, you should consult Chapter 5.

#### C.1 Document template for the project plan

The project plan should include formal data about the thesis project, like title, author, person ID, email-address, and supervisor name(s) plus the following sections, preferably in this order: introduction, aim, objectives, research questions, method, expected outcomes, time and activity plan, risk management, and references.

The introduction should describe the background and context of the proposed work. It should identify a problem and motivate its relevance. Furthermore, the introduction should review related work and describe how the proposed work fits in. The aim should describe the overall goal of the thesis in one or two brief sentences. Compared to this overall goal, the objectives are more clearly defined. The objectives are usually measurable and should be completed before specific deadlines. The research questions section may include one or more research questions or one or more hypotheses. In some cases, this section may include both hypotheses and research questions. In general, research questions should be concretely and clearly defined. Aims, objectives and research questions/hypotheses should be clearly related to each other. The method section should propose a suitable approach for answering the research questions together with a motivation for choosing the proposed approach. Expected outcomes briefly states the main

expected outcomes. The time and activity plan breaks down the work into reasonable tasks and a reasonable schedule. In risk management, various problems that may threaten the timely delivery of acceptable results are briefly investigated.

#### C.2 Document template for monograph theses

The thesis is the main artefact of the degree project. Accepted theses will be published electronically. It is therefore important that all theses have a uniform and professional appearance and, to some extent, a predictable breakdown of the content. A uniform appearance is particularly important with respect to the front and back of the title page. The title page should therefore be produced by filling in the necessary information in the document template for theses. This document template is only available in Microsoft Word format.

The title page should be followed by a structured abstract which should summarize the report by describing: context, purpose, method, results, and conclusions. At least one and a maximum of three keywords must be specified in succession after the structured abstract.

The next page can be set aside for thanks or acknowledgements to those who helped you during the thesis work. The content and format of this page is up to you, but the text should only highlight people who actually contributed to the thesis in some way. These persons should be arranged by the extent of their respective contributions. Usually this means that the student would like to thank the supervisor, any other contributing colleagues, fellow students, or family members.

The order of the main content of the thesis depends on the actual topic of the thesis. Different genres, research areas, or research methods have different traditions. You should therefore carefully investigate what is appropriate for your particular topic. The following items should, however, be included for all types of theses (but not necessarily in this order): table of contents, introduction, related work, problem, objectives, methodology, results, analysis and discussion, conclusions, and bibliography. The thesis text should have a scientific basis and be free from grammatical errors. Your supervisor is not responsible for pointing out language, style, and grammar issues. This would furthermore be a waste of precious subject expert time.

## C.3 Document template for compilation-style theses

A thesis can be also written as a scientific journal article instead of a monograph. A journal article presents the materials in a more concise form and usually contains less basic information about the research methodology (since it targets a more narrow audience with more knowledge of the theory and methods of the research area in question than

the general population). Due to this reason and since the journal article format is rather dense in general, it is difficult to include certain content that is required (and assessed) in theses. The compilation-style thesis therefore needs to include an introductory chapter that precedes the journal article and which includes a more thorough description and motivation of the research methodology (and any additional topics that are required in the degree project course, but which are not included in the journal article).

#### C.4 Document template for opposition reports

The opposition report comprises four main parts: introduction, critical review, required changes and recommended changes.

The introduction gives a brief overview over the reviewed thesis' content, results, and contributions from the reviewer's point of view. The critical review highlights the strengths and weaknesses of the reviewed thesis. Required changes points out issues that need to resolved in the final version of the thesis. Recommended changes points out further issues that are less critical, but would help to improve the thesis further.
